Samer A. Mahmoud

ASP.NET Core Backend Developer | API Architecture | Enterprise Systems

Contact Information :

Baghdad, Iraq : ssamr1082@gmail.com : 0773 272 7147 samer-asp.vercel.app

https://github.com/s4mr48

Professional Summary

Backend developer focused on building enterprise backend systems using ASP.NET Core and C#. Experience designing REST APIs, authentication systems, workflow-driven applications, ERP platforms, document management systems, and digital election systems. Strong experience with Entity Framework Core, relational database design, modular service architecture, and secure API development. Experienced in backend deployment and infrastructure management using IIS, Docker, and CI/CD pipelines with GitHub Actions.

Technical Skills :

- Programming : C# , C++ ,Python
- Frameworks : ASP.NET Core , Django,WinFroms
- DataBase : SQL Server , MySql ,
- Backend Development: RESTful API Design , Entity Framework Core, LINQ , JWT Authentication, Role-Based Authorization , SignalR
- Architecture : Dependency Injection , SOLID Principles , DTO Pattern , Middleware
- DevOps & Infrastructure : IIS Deployment , Docker , GitHub Actions CI/CD , Windows Server Hosting
- Tools : Git ,GitHub , Swagger / OpenAPI , AutoMapper , FluentValidation

---

Projects :

Law Firm Administration System API

ASP.NET Core Web API | C# | SQL Server

Samer A. Mahmoud

Backend system supporting legal administration operations, financial modules, and internal workflows.
Key Work
Developed modular APIs supporting legal administration modules.
Implemented authentication and permission management.
Built financial modules including ledger management and chart of accounts.
Developed workflow APIs supporting multi-step approval processes.
Implemented reporting and statistical endpoints.

Document Management System API
ASP.NET Core Web API | C# | SQL Server

Enterprise backend platform for document archiving and lifecycle management.
Key Work
Developed APIs for document archiving and lifecycle management.
Built secure file storage services supporting document upload and retrieval.
Implemented document search APIs with advanced filtering and querying.
Developed reporting and statistics endpoints for document monitoring.
Implemented backup and recovery APIs for system data protection.
Integrated system logging and infrastructure monitoring.

ERP Administration System API

ASP.NET Core Web API | C# | SQL Server

Enterprise backend system supporting administrative operations, financial modules, and internal organizational workflows.

Samer A. Mahmoud

Key Work

Designed modular REST APIs supporting ERP modules.
Developed APIs for managing organizational structures including departments and administrative units.
Implemented authentication and role-based authorization.
Built financial modules supporting accounting records and operational transactions.
Developed reporting and statistics endpoints for administrative monitoring.

Election Management System API

ASP.NET Core Web API | C# | SQL Server

Backend platform for managing digital elections including election cycles, candidates, voting execution, and result aggregation.

Key Work

Developed REST APIs for election cycle management and voting processes.
Implemented candidate and member management modules.
Built vote execution tracking and participation monitoring APIs.
Developed election result aggregation and reporting endpoints.
Implemented authentication and role-based authorization.
Designed relational database models using Entity Framework Core.

Work Experience

Backend Developer

The Golden Castle— Remote
2025-4 – Present

Samer A. Mahmoud

Developing and maintaining ASP.NET Core backend systems and REST APIs.

Key Work

Designed and implemented REST APIs using ASP.NET Core.
Implemented authentication and authorization systems using JWT.
Built database models using Entity Framework Core and SQL Server.
Maintained backend services supporting enterprise platforms.
Collaborated with distributed teams using Git-based workflows.

Backend Developer

Nastya Technology — Baghdad, Iraq
2025-07 – Present

Developing backend systems supporting enterprise administration platforms.

Key Work

Developed ASP.NET Core APIs supporting enterprise administrative systems.
Implemented workflow modules and reporting services.
Designed relational database models using Entity Framework Core.
Maintained backend services and system APIs.
Supported backend deployment and server configuration using IIS.

DevOps & Deployment

Deploying ASP.NET Core applications using IIS.
Containerizing backend applications using Docker.
Implementing CI/CD pipelines using GitHub Actions.
Managing backend deployment on Windows Server infrastructure.

Samer A. Mahmoud

Education

Bachelor of Information Technology (In Progress)
University of Information Technology and Communications
Baghdad, Iraq
